REASONS FOR ALLOWANCE

Remark

- This Office Action is in response to applicant's response, filed February 8, 2007, to Ex. Parte Quayle action.
- The applicant has not filed an amendment to the claims. The amendment to the specification is accepted into the file.
- Claims 7, 9-14, 16-24, and 26-30 remain pending in this application.

Drawings

1. The drawings were received on **February 8, 2007**. These drawings are accepted.

Reasons For Allowance

2. The following is an examiner's statement of reasons for allowance: of the prior art references considered, none has disclosed a *pellicle* that is comprised of a *frame* and an *amorphous fluoropolymers thing film* for projecting a *photomask image* onto a *wafer* in a *photolithographic process* wherein the thin film has an *optical thickness* that is **greater** than a *design thickness* by an amount *less than or equal to one-quarter of the particular wavelength* of the incident light at an *angle of incidence greater than zero*, such that the transmission of this incident light is *maximized*. The design thickness of the thin film is the optical thickness of the thin film that maximizes transmission of light incident to the thin film at a normal angle. The thin film is formed to cooperate with a *photomask* including an opening such that the incident light is *transmitted* through the opening in the photomask *through the thin film* onto the wafer to project an image of the photomask opening onto the wafer wherein a *portion of the transmitted light* is **diffracted** by the photomask opening and then **passes** through the thin film at angle of incidence **greater than zero**. The transmission of this portion of the incident light is therefore maximized.
